Education

Vellore Institute of Technology **2022 - 2026**
B.Tech in Computer Science & Engineering ***CGPA**: 7.86*

Experience

Ram Fincorp | Financial Technology (NBFC) **March 2026 – Present**
SDE *Gurgaon, Haryana*

- Designed a **PII encryption vault** securing mobile, PAN, and email across **20+ MySQL tables**, using **SHA-256 blind indexes** to resolve encrypted login lookups in **1 indexed query instead of 20** sequential scans.
- Migrated **100% of live production traffic** with zero downtime via a **feature-flagged dual-write** rollout with read-fallback and instant rollback, and masked PII in **API audit logs** to close a compliance gap.
- Automated **CKYC bulk regulatory filing** and **Account Aggregator consent** flows, cutting a manual process to a single trigger API, and shipped **Pino structured logging** with correlation IDs across **4 NBFC lending products**.
- Built core onboarding APIs including the **Lead Push API** with mobile/PAN validation and **KFS lat-long capture** (new MySQL schema + backend/UI), serving **3 partner platforms** from one codebase.

Lit Lab | Software Services **May 2025 – July 2025**
SDE Intern *Remote*

- Developed and deployed **3 production-grade web applications using PostgreSQL and Docker**, streamlining development workflows and reducing release cycles by 40%.
- Accelerated database for a real estate platform by implementing indexing strategies, reducing query time from **2.1s to 750ms and supporting 10,000+** daily searches efficiently.
- Architected a **real-time crypto gaming platform** supporting **1,000+** concurrent users with sub-100ms latency using **WebSockets**, and automated **CI/CD pipelines** with GitHub Actions and **AWS**, achieving 99.5% uptime while improving cross-team delivery speed.

Projects

Traffic-Sense-AI : Traffic Monitoring ***Live** | **GitHub***
React.js, YOLOv8, Python, OpenCV

- **Real-Time Computer Vision:** Integrated custom **YOLOv8 architectures (FDIDH, DySample)** to achieve high precision detection and classification of vehicles in complex traffic scenarios.
- **High-Concurrency Streaming Pipeline:** Engineered a multi-threaded **Python backend** capable of processing 4+ simultaneous video feeds with Streamlined **OpenCV** buffering and low-latency MJPEG streaming.
- **Full-Stack Architecture:** Crafted a responsive **React (TypeScript)** dashboard featuring **interactive data visualizations** tion **(Recharts)** for live traffic analytics and model performance metrics.

PixelPrompt: AI Text-To-Image Platform ***Live** | **GitHub***
MongoDB, Express.js, React.js, Node.js

- Led a **MERN-based** AI text-to-image platform generating images in ¡15 seconds, supporting **500+** users with a structured **MongoDB** schema (5 collections).
- Implemented 12+ secure **REST APIs** with environment-based configurations, achieving **200ms** response time and ensuring efficient backend performance.
- Enhanced AI output consistency with advanced prompt engineering and optimized frontend using **React** Context + Reducers, reducing re-renders by **30%.**

Skills

Programming Languages: C++, C, Python, Java, Go, JavaScript, TypeScript, SQL

Tools and Frameworks: React.js, Node.js, Express.js, SpringBoot, Kafka, Git, AWS, Grafana, Postman, Docker

Databases: MongoDB, MySQL, Redis

Coursework: Data Structures, Algorithms, OOPs, DBMS, Operating Systems, Computer Networks
